

The house style

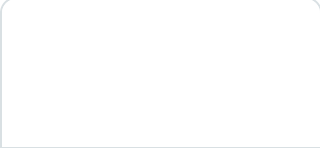

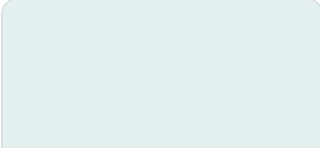

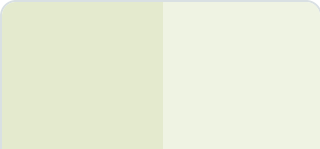

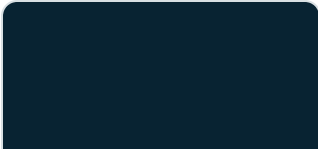

Colors, type, shapes and the plate drawings behind the new Science page, the research timeline and the recolored Home. One document, so every new page and drawing matches.

The Science hero artwork on paper: one navy ink, a pale sage wash, white paper. The dark original is on page 7.

This supersedes the visual sections of **brand_assets/brand-guide.md** (cyan accents, cream body, the photographic hero); that file's locked copy lines and voice rules still stand. Heliopolis, the private team site, is the same family: cream paper, navy ink, one lime accent. On the public site the paper is white and the accent is teal.

White paper, navy ink, and teal for the one thing that matters.

 Paper #FFFFFF The reading surface. Never gray it.	 Quiet band #F5F7F3 Alternate sections, footer. A whisper of sage, not cream.	 Ink #112751 Headings and line drawings share it. Measured from the plates.	 Body text #26374F One step softer than ink, for long copy.
 Muted text #5A687A Captions, labels, secondary lines. 5.7:1 on white.	 Rules #D9E0E3 · #B9C4CB Hairline and stronger. One-pixel lines instead of boxes.	 Teal #0A6F7E · #62C7C2 on night Links, key numbers, live states. The only attention color.	 Teal tint #E4F0EF Selected chips, soft highlights. Never a button.
 Sage wash #E4EACE · #EFF3E3 Only inside drawings, or a two-pixel highlight rule. Never a fill for boxes or buttons.	 Night #082332 The dark room: one per page at most, where light is measured or a line needs a pause.	 Coral #C8553D Meaning only: blood vessels in the growth story, late-stage risk.	 The mix paper · ink · teal Nearly every page is these three. Sage and night are occasions.

The three surfaces

PAPER Cancer has a light signature. Most of every page. Drawings blend into it with no box showing.	QUIET BAND The studies, in order. A change of pace between two paper sections, and the footer.	NIGHT Too faint to see. Once per page at most. Teal turns to #62C7C2; buttons turn white with ink text.
--	---	--

Why white and not Heliopolis cream: #FAF9F5 is Anthropic's exact page color, and Kelly asked for the timeline's colors. On paper, every drawing is blended with **mix-blend-mode: multiply** after its own paper has been whitened, so no box ever shows.

Plus Jakarta Sans for the claims. DM Sans for the reading.

WEIGHT	Headings are always 500. Never bold, never a serif (Glenn hates serifs).
CLAIMS	Headlines are claims, not topics. Read on their own, top to bottom, they tell the story.
COPY	Plain words, past tense for lab results, no em dashes, no AI vocabulary. Checked with <code>assets/next/tools/copy_lint.py</code> .

LABELS	Uppercase and tracked, used sparingly: kickers, chart labels, plate captions.
MEASURE	Body text sits at 60 to 68 characters a line. Wider than that, add a column, not a longer line.
FILES	Self-hosted variable fonts in <code>assets/next/fonts/</code> . No Google Fonts call.

Boxes only where they earn it. Everything else is a hairline.

About this illustration

+

● PHOTON COUNTER

● SAMPLE DISH

CORNERS

6px on buttons, fields and chips; 8px on images and cards. No shadows, gradients or glow.

DRAWING

Give it room, never crop it, put its labels on the picture next to the thing they name, and fit the words around it.

RHYTHM

Sections open with a kicker on a hairline. One dark room per page at most; the rest is paper.

MOTION

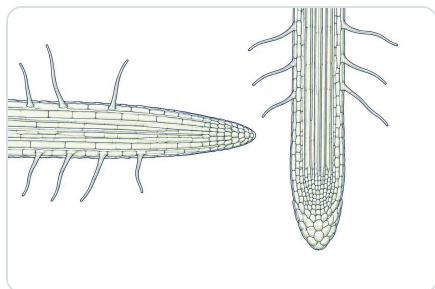

Slow and small, pauses offscreen, stops for reduced motion. Light is dots and fine lines in ink or teal, never neon.

PHONES

One column, no sideways scroll, 44px targets, long content folds.

Fine-line engravings in one navy ink, on white, with a pale sage wash.

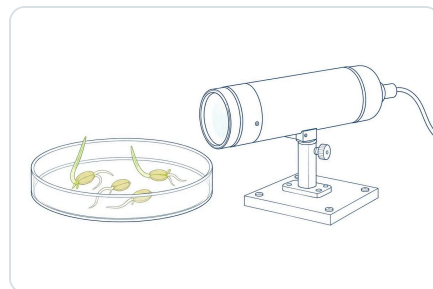

They look like plates from a careful natural-history atlas, drawn by one hand with one pen. Subjects are real apparatus and biology: petri dishes, photon counters on stands, dark chambers, seedlings, roots, cells, a mouse on a stage, a person in profile with a detector near the head.

labels added in code

Ask for an engraving, not an illustration.

USE CASE

Scientific-educational illustration for a website.

PRIMARY REQUEST

A fine-line scientific engraving of [SUBJECT], drawn in a single navy ink (#112751) on pure white paper, in the manner of a 19th-century natural-history atlas plate. Thin, even contour lines; delicate crosshatching and stipple only where shade is needed; large areas left as clean white paper. A pale sage-green wash (#E4EACE) tints only [WHICH SURFACES: the sample, the leaves, the dish contents]; everything else stays uncolored. Light, when it must be shown, is drawn as tiny separated dots and faint radiating hairlines in the same navy ink, or as a very pale sage glow, never as a bright or neon effect.

COMPOSITION

Landscape 3:2, 1536 by 1024 or larger. One clear subject, centered, with generous white margins on every side; nothing cropped by the frame. Objects are mechanically credible and drawn from a slightly elevated three-quarter view, like a lab manual. If two things must be shown (for example a detector facing a dish), leave clean white space between them.

MOOD

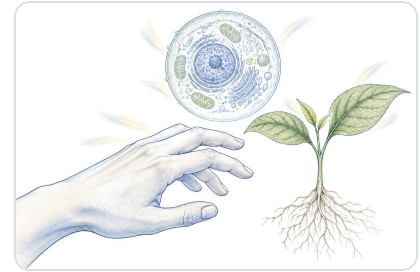

Calm, precise, elegant, editorial. Museum plate, not diagram software; hand-drawn, not vector-perfect.

DO NOT INCLUDE

Color other than the navy ink and the sage wash; gradients, glows, halos, neon, 3D shading, drop shadows; photographic textures; a paper texture, vignette, border or box; text, numbers, arrows, callouts, UI or watermark (labels are added later in code); backgrounds other than flat pure white.

CONSISTENCY

Same line weight and ink density as the reference plates attached. Match their sparse hatching and the way small mechanical parts (screws, rings, cables) are drawn with tiny confident lines.

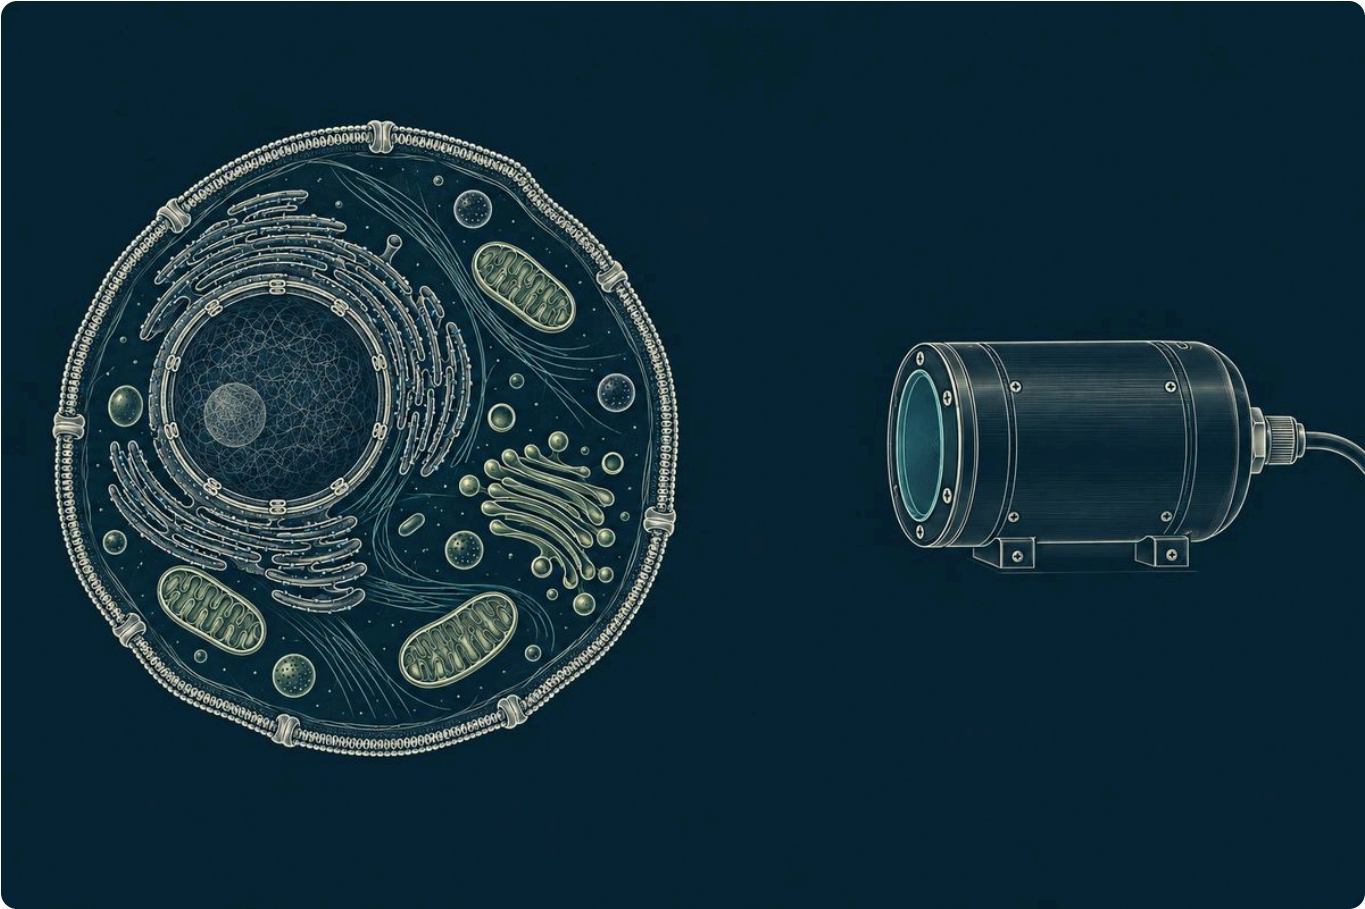

Living light: a hand, a cell, a seedling.
Drawn to this brief for the hero options.

Hand the prompt a reference plate or two from `assets/next/review/style-pack/` and the two measured values: ink #112751, wash #E4EACE.

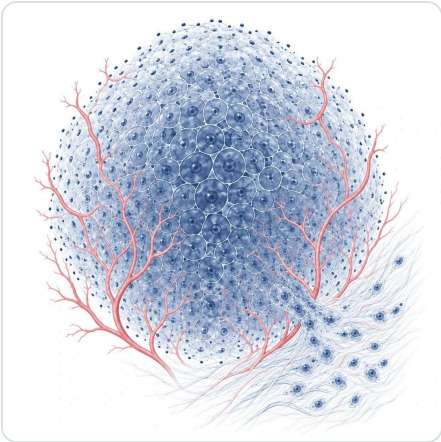

Ask for no labels. The site draws labels and leader lines in code, so they stay crisp and editable.

Then whiten the paper (`assets/next/plates/normalize_plates.py`) and save a WebP, so the plate blends into the page with no box.

The same drawing idea, reversed once and re-inked once.

Hero scale: the engraving reversed, ivory and pale sage lines on flat navy #082332, for the one dark room. Its generation brief is kept in [WEBSITE RECENT/_build/science-overview/measurement-atlas/PROMPT.md](#). The paper version on the cover was made by remapping this artwork's colors ([assets/next/art/paperize.py](#)), not by redrawing.

One frame of the growth story, re-inked.

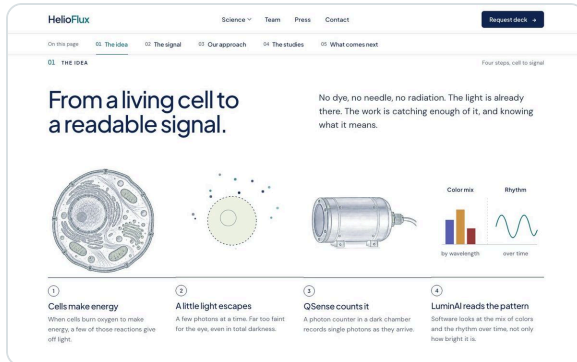

The growth story

The tumor sequence on Home keeps its own drawings; only the ink changed, from blue-violet to the plate navy, with a luminance-to-navy ramp ([assets/next/tumor-growth/reink.py](#)). Vessels stay coral, the one warm note, because there the color carries meaning.

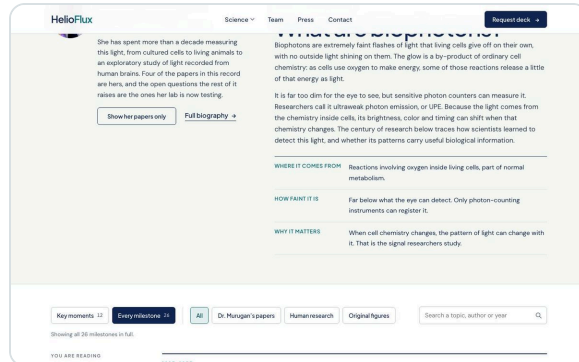

What to keep in mind

NIGHT	Reserve it for where light is being measured. Teal turns to #62C7C2; buttons turn white.
REMAP	Recoloring existing artwork is allowed and preferred over redrawing an approved piece.
CORAL	Only with meaning: vessels, late-stage risk. Never decoration.

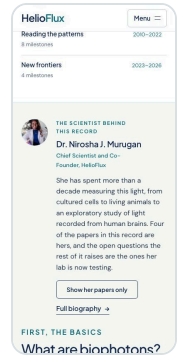

Paper, ink, one teal, and a drawing with room to breathe.

Science, the dark room and the explainer.

Timeline, the century at a glance.

On a phone.

Before shipping a drawing or a page

- 1 Paper whitened to pure white, or a transparent background; no faint box on the page.
- 2 One drawing per place, uncropped, given real room.
- 3 Labels on the picture, in code, in the site's sans.
- 4 Ink and wash match the values on page 2; no new colors.
- 5 Headings read as a story on their own; no em dashes; copy lint passes.
- 6 Checked at 1440, 768 and 390; no sideways scroll; motion pauses and reduced motion is respected.
